Journal of Materials Processing Technology 103 (2000) 441–446

Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 103

Abductive network
The optimization accuracy control of a die-casting product part, 173
Accuracy
Accuracy in process chains using hydroforming, 424
Aging
Studies on solidification, aging and forgeability of modified stainless steels, 324
ALE
Simulation of the orthogonal metal cutting process using an arbitrary Lagrangian–Eulerian finite-element method, 267
Aluminium matrix composites
Relationship between cutting force and PCD cutting tool wear in machining silicon carbide reinforced aluminium, 417
Aluminum
Finite element analysis of damage evolution and the prediction of the limiting draw ratio in textured aluminum sheets, 374
Aluminum alloy
Upper bound analysis for forging of trochoidal gears, 347
Aluminum cup
Analysis of the hydromechanical deep drawing of cylindrical cups, 367
Anisotropy
Finite element analysis of damage evolution and the prediction of the limiting draw ratio in textured aluminum sheets, 374
Annealing optimization algorithm
The optimization accuracy control of a die-casting product part, 173
Arbitrary Lagrange–Euler method
Predicting the shape of blanked products: a finite element approach, 51
Architecture
Computer aided process planning for sheet metal based on information management, 120
Artificial intelligence
A BP-neural network predictor model for plastic injection molding process, 411
Artificial neural network
A BP-neural network predictor model for plastic injection molding process, 411
Aus-Bay quenching
The influence of flow-forming parameters and microstructure on the quality of a D6ac steel, 362
Auto-body panel
Investigation of sheet metal forming by numerical simulation and experiment, 404

Bending
Development of irradiation strategies for 3D-laser forming, 102
Blast furnace slag
Performance of steel in ordinary Portland, fly ash and slag cement mortars during the hydration period, 383
Boriding and carburizing methods
An investigation on surface properties of treated low carbon and alloyed steels (boriding and carburizing), 310
Bulge forming
Finite element simulation of bulge forming of a cross-joint from a tubular blank, 333

CAPP
Computer aided process planning for sheet metal based on information management, 120
Chamber pressure
Analysis of the hydromechanical deep drawing of cylindrical cups, 367
Compact neighborhood algorithm
Large-scale nesting of irregular patterns using compact neighborhood algorithm, 135
Computer simulation
Computer simulation of a non-symmetrical-section steel forming process by the spline finite strip method based on the U.L. method, 343
Computer-aided engineering analysis
A BP-neural network predictor model for plastic injection molding process, 411
Computer-assisted process planning system
Optimal selection of parameters in multi-tool drilling, 318
Conceptual design
3D conceptual design of sheet metal products by sketching, 128
Concurrent engineering
Computer aided process planning for sheet metal based on information management, 120
Controlled rolling
The influence of hot rolling parameters on the microstructure and mechanical properties of an ultra-high strength steel, 276
Conventional spinning
Metal forming: an analysis of spinning processes, 114
Copper–beryllium alloy
An experimental study on electro-discharge machining and polishing of high strength copper–beryllium alloys, 389
Corrosion
Development of fibre metal laminates for advanced aerospace structures, 1
Cost control
A generic framework for cost estimation and cost control in product design, 141
Cost estimation
A generic framework for cost estimation and cost control in product design, 141
Creep deformation behavior
Deformation prediction of the laminated object modeling composite laminates, 261
Crevice corrosion
Initiation modeling of crevice corrosion in 316L stainless steels, 206
Crevice geometry
Initiation modeling of crevice corrosion in 316L stainless steels, 206

Elsevier Science S.A.
PII: S0924-0136(00)00533-1

Customer focused logistics
Variation in production schedules — implications for both the company and its suppliers, 155
Cutting forces
Relationship between cutting force and PCD cutting tool wear in machining silicon carbide reinforced aluminium, 417
Cutting stock problem
Large-scale nesting of irregular patterns using compact neighborhood algorithm, 135
Cylindrical cup
Analysis of the hydromechanical deep drawing of cylindrical cups, 367

D6ac steel
The influence of flow-forming parameters and microstructure on the quality of a D6ac steel, 362
Damage
Finite element analysis of damage evolution and the prediction of the limiting draw ratio in textured aluminum sheets, 374
Deep drawing
Deep drawing simulations of Tailored Blanks and experimental verification, 65
Deep drawing of pressure vessel end closures: finite element simulation and validation, 247
Deformation constitutive equation
Deformation prediction of the laminated object modeling composite laminates, 261
Deformation field
Can a new experimental and numerical study improve metal blanking? 44
Diamond wheel
Soft-elastic dressing of fine grain diamond wheels, 194
Die-casting die
The optimization accuracy control of a die-casting product part, 173
Digital image correlation
Can a new experimental and numerical study improve metal blanking? 44
Dimension prediction
Deformation prediction of the laminated object modeling composite laminates, 261
Dimensional analysis
Material removal in the optical polishing of hydrophilic polymer materials, 230
Dimensional chain
The Monte-Carlo method for solving the dimensional chain positive problem, 189
Discrete fracture approach
Predicting the shape of blanked products: a finite element approach, 51
Discretization
Comparison of SERR analysis in extrusion with experiment, 293
Dislocation substructures
Analysis of plastic instability in commercially pure Al alloys, 160
Dissimilar aluminium alloys
Welding of dissimilar aluminium alloys, 29
Dressing
Soft-elastic dressing of fine grain diamond wheels, 194
Ductility
A criterion for local necking, 165
Similarity of ductility between model and real materials, 434

Electro-discharge machining
An experimental study on electro-discharge machining and polishing of high strength copper–beryllium alloys, 389
Equivalent continuum
Yield criterion for a perforated sheet with a uniform triangular pattern of round holes and a low ligament ratio, 353
Experiment
Deep drawing simulations of Tailored Blanks and experimental verification, 65
Experimental validation
Laser cutting of metal laminates: analysis and experimental validation, 23
Experiments
Numerical model for the oil pressure distribution in the hydromechanical deep drawing process, 74
Expert system
3D conceptual design of sheet metal products by sketching, 128
Explicit finite element
Analysis of the hydromechanical deep drawing of cylindrical cups, 367
Extrusion
Comparison of SERR analysis in extrusion with experiment, 293

Fatigue
Development of fibre metal laminates for advanced aerospace structures, 1
Fe_2B phase
An investigation on surface properties of treated low carbon and alloyed steels (boriding and carburizing), 310
FE-simulation
Die-less forming of sheet metal parts, 109
Fibre metal laminates
Development of fibre metal laminates for advanced aerospace structures, 1
Filling process
An investigation of flow characteristics considering the effect of viscosity variation in the thixoforming process, 237
Finite element
Investigation of sheet metal forming by numerical simulation and experiment, 404
Finite element analysis
Failure mechanism of riveted joint in fibre metal laminates, 36
Finite element method
Can a new experimental and numerical study improve metal blanking? 44
Predicting the shape of blanked products: a finite element approach, 51
An evaluation of three material models used in the finite element simulation of a sheet stretching process, 57
Numerical model for the oil pressure distribution in the hydromechanical deep drawing process, 74
Development of irradiation strategies for 3D-laser forming, 102
Finite element simulation of bulge forming of a cross-joint from a tubular blank, 333
Yield criterion for a perforated sheet with a uniform triangular pattern of round holes and a low ligament ratio, 353
Finite element simulation
Deep drawing of pressure vessel end closures: finite element simulation and validation, 247
Finite element analysis of damage evolution and the prediction of the limiting draw ratio in textured aluminum sheets, 374
Finite-element method
Simulation of the orthogonal metal cutting process using an arbitrary Lagrangian–Eulerian finite-element method, 267
Flame resistance
Development of fibre metal laminates for advanced aerospace structures, 1
Flash weldability
A study on resistance welding in steel sheets for tailor welded blank. Evaluation of flash weldability and formability (2nd Report), 218
Flat pattern
3D conceptual design of sheet metal products by sketching, 128

Flatness
Prediction of shape aberrations due to punching, shearing and slitting, 87
Flexibility
Variation in production schedules — implications for both the company and its suppliers, 155
Flow stress
Prediction of the flow stress of high-speed steel during hot deformation using a BP artificial neural network, 200
Flow turning
The influence of flow-forming parameters and microstructure on the quality of a D6ac steel, 362
Fly ash
Performance of steel in ordinary Portland, fly ash and slag cement mortars during the hydration period, 383
FML
Failure mechanism of riveted joint in fibre metal laminates, 36
Forging
Studies on solidification, aging and forgeability of modified stainless steels, 324
Forging of trochoidal gears
Upper bound analysis for forging of trochoidal gears, 347
Formability
A study on resistance welding in steel sheets for tailor welded blank. Evaluation of flash weldability and formability (2nd Report), 218
Similarity of ductility between model and real materials, 434
Forming
State-of-the-art of simulation of sheet metal forming, 14
Forming operations
Analysis of plastic instability in commercially pure Al alloys, 160
Forming simulation
Investigation of sheet metal forming by numerical simulation and experiment, 404
Fractals
Tribological system modelling and simulation in metal forming processes, 80
Free corrosion potential
Performance of steel in ordinary Portland, fly ash and slag cement mortars during the hydration period, 383
Friction
Tribological system modelling and simulation in metal forming processes, 80

Generic framework
A generic framework for cost estimation and cost control in product design, 141
Genetic algorithm
Large-scale nesting of irregular patterns using compact neighborhood algorithm, 135
Geometric model
Investigation of sheet metal forming by numerical simulation and experiment, 404
Grain size control
The influence of hot rolling parameters on the microstructure and mechanical properties of an ultra-high strength steel, 276
GTA welding
Welding of dissimilar aluminium alloys, 29

Hot cracking
Welding of dissimilar aluminium alloys, 29
Hot rolling
The influence of hot rolling parameters on the microstructure and mechanical properties of an ultra-high strength steel, 276
Hybrid material
Laser cutting of metal laminates: analysis and experimental validation, 23
Hydroforming
Accuracy in process chains using hydroforming, 424
Hydromechanical deep drawing
Numerical model for the oil pressure distribution in the hydromechanical deep drawing process, 74
Analysis of the hydromechanical deep drawing of cylindrical cups, 367

Image sensing
Evaluation of the surface deflections in pressed automobile panels by an optical reflection method, 280
Impact
Development of fibre metal laminates for advanced aerospace structures, 1

Joining system
Die-less forming of sheet metal parts, 109

Kinematically admissible velocity field
Comparison of SERR analysis in extrusion with experiment, 293

Laminates
Laser cutting of metal laminates: analysis and experimental validation, 23
Laser cutting
Laser cutting of metal laminates: analysis and experimental validation, 23
Laser forming
Development of irradiation strategies for 3D-laser forming, 102
Laser melted
Laser treatment of Ti–6Al–4V alloy prior to plasma nitriding, 304
Life prediction model
Initiation modeling of crevice corrosion in 316L stainless steels, 206
Limiting draw ratio
Finite element analysis of damage evolution and the prediction of the limiting draw ratio in textured aluminum sheets, 374
Liquid-phase sintering
Effects of powder mixing technique and tungsten powder size on the properties of tungsten heavy alloys, 288
Local necking
A criterion for local necking, 165
Logistics
Logistics from IMS towards virtual factory, 6
LOM composite laminate
Deformation prediction of the laminated object modeling composite laminates, 261
Low temperature plasma
Surface structuring of poly(ethylene terephthalate) fibres with a UV excimer laser and low temperature plasma, 225

Mass customisation
Variation in production schedules — implications for both the company and its suppliers, 155
Material model
An evaluation of three material models used in the finite element simulation of a sheet stretching process, 57
Material removal
Material removal in the optical polishing of hydrophilic polymer materials, 230
Mechanical properties
Welding of dissimilar aluminium alloys, 29
Metal forming
Accuracy in process chains using hydroforming, 424
Metal spinning
Metal forming: an analysis of spinning processes, 114

The influence of flow-forming parameters and microstructure on the quality of a D6ac steel, 362
Microstructure
A study on resistance welding in steel sheets for tailor welded blank. Evaluation of flash weldability and formability (2nd Report), 218
Miniaturization
Miniaturization in sheet metal working, 95
Model material
Similarity of ductility between model and real materials, 434
Modeling
Laser cutting of metal laminates: analysis and experimental validation, 23
Material removal in the optical polishing of hydrophilic polymer materials, 230
Monte-carlo simulation
The Monte-Carlo method for solving the dimensional chain positive problem, 189
Multi-tool drilling
Optimal selection of parameters in multi-tool drilling, 318

Nesting
Large-scale nesting of irregular patterns using compact neighborhood algorithm, 135
Newtonian rheology model
An investigation of flow characteristics considering the effect of viscosity variation in the thixoforming process, 237
Non-symmetrical-section steel
Computer simulation of a non-symmetrical-section steel forming process by the spline finite strip method based on the U.L. method, 343
Numerical simulation
State-of-the-art of simulation of sheet metal forming, 14

Optical measurement
Evaluation of the surface deflections in pressed automobile panels by an optical reflection method, 280
Optimal selection
Optimal selection of parameters in multi-tool drilling, 318
Ordinary Portland cement
Performance of steel in ordinary Portland, fly ash and slag cement mortars during the hydration period, 383
Orientation constraints
Large-scale nesting of irregular patterns using compact neighborhood algorithm, 135
Orthogonal metal cutting process
Simulation of the orthogonal metal cutting process using an arbitrary Lagrangian–Eulerian finite-element method, 267
Ostwald–deWaele rheology model
An investigation of flow characteristics considering the effect of viscosity variation in the thixoforming process, 237
Overall equipment effectiveness and just-in-time
Implementation of TPM in cellular manufacture, 149

Perforated sheet
Yield criterion for a perforated sheet with a uniform triangular pattern of round holes and a low ligament ratio, 353
Planar blanking
Can a new experimental and numerical study improve metal blanking? 44
Planned preventive maintenance
Implementation of TPM in cellular manufacture, 149
Plasma nitriding
Laser treatment of Ti–6Al–4V alloy prior to plasma nitriding, 304
Plastic injection molding
A BP-neural network predictor model for plastic injection molding process, 411
Polarisation resistance
Performance of steel in ordinary Portland, fly ash and slag cement mortars during the hydration period, 383
Polishing
Material removal in the optical polishing of hydrophilic polymer materials, 230
Poly(ethylene terephthalate) fibres
Surface structuring of poly(ethylene terephthalate) fibres with a UV excimer laser and low temperature plasma, 225
Polycrystalline diamond
Relationship between cutting force and PCD cutting tool wear in machining silicon carbide reinforced aluminium, 417
Polymer
Material removal in the optical polishing of hydrophilic polymer materials, 230
Powder mixing
Effects of powder mixing technique and tungsten powder size on the properties of tungsten heavy alloys, 288
Powder size
Effects of powder mixing technique and tungsten powder size on the properties of tungsten heavy alloys, 288
Pre-bulging
Analysis of the hydromechanical deep drawing of cylindrical cups, 367
Prediction of flow stress
Prediction of the flow stress of high-speed steel during hot deformation using a BP artificial neural network, 200
Press
A study on resistance welding in steel sheets for tailor welded blank. Evaluation of flash weldability and formability (2nd Report), 218
Press forming
Evaluation of the surface deflections in pressed automobile panels by an optical reflection method, 280
Product design
A generic framework for cost estimation and cost control in product design, 141
Production
Variation in production schedules — implications for both the company and its suppliers, 155
Pseudo-random number
The Monte-Carlo method for solving the dimensional chain positive problem, 189
Punching
Prediction of shape aberrations due to punching, shearing and slitting, 87

Re-heating process
An investigation of flow characteristics considering the effect of viscosity variation in the thixoforming process, 237
Relaxation circuit
An experimental study on electro-discharge machining and polishing of high strength copper–beryllium alloys, 389
Remeshing
Predicting the shape of blanked products: a finite element approach, 51
Reynold's equation
Numerical model for the oil pressure distribution in the hydromechanical deep drawing process, 74
Ring compression test
Studies on solidification, aging and forgeability of modified stainless steels, 324
Riveting
Failure mechanism of riveted joint in fibre metal laminates, 36

SERR technique
Comparison of SERR analysis in extrusion with experiment, 293

Shear forming
Metal forming: an analysis of spinning processes, 114
Shearing
Prediction of shape aberrations due to punching, shearing and slitting, 87
Sheet forming
Finite element analysis of damage evolution and the prediction of the limiting draw ratio in textured aluminum sheets, 374
Sheet metal
State-of-the-art of simulation of sheet metal forming, 14
Can a new experimental and numerical study improve metal blanking? 44
Prediction of shape aberrations due to punching, shearing and slitting, 87
3D conceptual design of sheet metal products by sketching, 128
Evaluation of the surface deflections in pressed automobile panels by an optical reflection method, 280
Sheet metal blanking
Predicting the shape of blanked products: a finite element approach, 51
Sheet metal forming
Logistics from IMS towards virtual factory, 6
Die-less forming of sheet metal parts, 109
Sheet metal working
Miniaturization in sheet metal working, 95
Simulation
Deep drawing simulations of Tailored Blanks and experimental verification, 65
Finite element simulation of bulge forming of a cross-joint from a tubular blank, 333
Similarity of ductility between model and real materials, 434
Single-layer structure
Deformation prediction of the laminated object modeling composite laminates, 261
Size effects
Miniaturization in sheet metal working, 95
Sketch
3D conceptual design of sheet metal products by sketching, 128
Slitting
Prediction of shape aberrations due to punching, shearing and slitting, 87
Solidification
Studies on solidification, aging and forgeability of modified stainless steels, 324
Spin forging
Metal forming: an analysis of spinning processes, 114
Spline finite strip method
Computer simulation of a non-symmetrical-section steel forming process by the spline finite strip method based on the U.L. method, 343
Stainless steel
Initiation modeling of crevice corrosion in 316L stainless steels, 206
Studies on solidification, aging and forgeability of modified stainless steels, 324
Steel cup
Analysis of the hydromechanical deep drawing of cylindrical cups, 367
Strain localisation
An evaluation of three material models used in the finite element simulation of a sheet stretching process, 57
Strain path
A criterion for local necking, 165
Strain rate sensitivity
A criterion for local necking, 165
Surface deflection
Evaluation of the surface deflections in pressed automobile panels by an optical reflection method, 280
Surface finish and machining time
Three and five axes milling of sculptured surfaces, 398

2024-T3 Aluminium alloy
Failure mechanism of riveted joint in fibre metal laminates, 36
T1 high-speed steel
Prediction of the flow stress of high-speed steel during hot deformation using a BP artificial neural network, 200
Tailored Blank
Deep drawing simulations of Tailored Blanks and experimental verification, 65
Texture
Analysis of plastic instability in commercially pure Al alloys, 160
Finite element analysis of damage evolution and the prediction of the limiting draw ratio in textured aluminum sheets, 374
Thermomechanical processing
The influence of hot rolling parameters on the microstructure and mechanical properties of an ultra-high strength steel, 276
Thick plate
Deep drawing of pressure vessel end closures: finite element simulation and validation, 247
Thixoforming
An investigation of flow characteristics considering the effect of viscosity variation in the thixoforming process, 237
Three and five axes milling
Three and five axes milling of sculptured surfaces, 398
Ti–6Al–4V alloy
Laser treatment of Ti–6Al–4V alloy prior to plasma nitriding, 304
Time-temperature dependence
Deformation prediction of the laminated object modeling composite laminates, 261
Tool type and orientation
Three and five axes milling of sculptured surfaces, 398
Tools wear
Relationship between cutting force and PCD cutting tool wear in machining silicon carbide reinforced aluminium, 417
Total productive maintenance
Implementation of TPM in cellular manufacture, 149
Tribology
Tribological system modelling and simulation in metal forming processes, 80
Tribosystems
Tribological system modelling and simulation in metal forming processes, 80
Tube forming
Accuracy in process chains using hydroforming, 424
Tube spinning
The influence of flow-forming parameters and microstructure on the quality of a D6ac steel, 362
Tubes
Die-less forming of sheet metal parts, 109
Tungsten heavy alloys
Effects of powder mixing technique and tungsten powder size on the properties of tungsten heavy alloys, 288
TWB
A study on resistance welding in steel sheets for tailor welded blank. Evaluation of flash weldability and formability (2nd Report), 218

U.L. method
Computer simulation of a non-symmetrical-section steel forming process by the spline finite strip method based on the U.L. method, 343
UHSS
The influence of hot rolling parameters on the microstructure and mechanical properties of an ultra-high strength steel, 276

Ultra-precision grinding
Soft-elastic dressing of fine grain diamond wheels, 194
Upper bound analysis
Upper bound analysis for forging of trochoidal gears, 347
Upper-bound
Comparison of SERR analysis in extrusion with experiment, 293
UV excimer laser
Surface structuring of poly(ethylene terephthalate) fibres with a UV excimer laser and low temperature plasma, 225

V-bending test
A study on resistance welding in steel sheets for tailor welded blank. Evaluation of flash weldability and formability (2nd Report), 218
Velocity discontinuity
Comparison of SERR analysis in extrusion with experiment, 293
Virtual factory
Logistics from IMS towards virtual factory, 6
Viscosity
An investigation of flow characteristics considering the effect of viscosity variation in the thixoforming process, 237
Void nucleation and growth
Finite element analysis of damage evolution and the prediction of the limiting draw ratio in textured aluminum sheets, 374

Working media
Die-less forming of sheet metal parts, 109
World class manufacture
Implementation of TPM in cellular manufacture, 149

X-ray diffraction method
An investigation on surface properties of treated low carbon and alloyed steels (boriding and carburizing), 310
